

Help protect your sight from age-related macular degeneration (AMD)

Early screening and innovation with I-SCREEN

Why this matters

AMD is a leading cause of vision loss after age 50.

It can make reading, recognising faces, and daily life more difficult.

Catching it early gives you the best chance to protect your eyesight.

How screening works

- 1** Primary eye care providers take high-resolution retinal images
- 2** A board-certified ophthalmologist analyses your retinal images for early signs of AMD – even before symptoms begin
- 3** If needed, you are referred quickly for treatment

Benefits for you

- ✓ Spot early AMD before vision is affected
- ✓ Faster access to treatment where necessary
- ✓ Personalised follow-up care
- ✓ Guidance to reduce risks (blood pressure, diet, etc.)

What you can do

- Get regular eye checks
- Stop smoking
- Protect eyes from UV light
- Maintain a healthy weight and balanced diet

About I-SCREEN

We combine expert eye care with advanced AI development to make screening more accurate and more widely accessible across Europe.
